## Preventive Maintenance And Repair

Our major concern in the first Softspa development, in the late 1980's, was to 'Keep It Simple'. The idea was not only to make it easy to set up anywhere and more comfortable to relax in, but also less hassle to keep in good operating condition.

Proper water treatment is the best preventive maintenance. Maintaining **Softchlor or Softguard** (bromine) levels low and PH and Alkalinity high with **Softrise** is good for your body chemistry AND the condition of Softspa components. Low PH and Alk. (high acid) water balance eats away at the elasticity of the vinyl liner, o-rings, gaskets and seals. It is the cause of wrinkles and bumps in the vinyl liner and will, eventually, make it brittle and crack. We have helped hundreds of our customers, from CA to ME, change their own liners on their **Softubs tm, Comfort Spas tm and Splashtubs tm**. We also ship quality bi-fold, lock-down cover replacements, nationally.

Our biggest concern, for our customers, is timely pump seal kit replacement. Depending on your personal water treatment, pump seals last approximately 2-3 years before they leak and, eventually, spray water. That is why the pumps on all of our Softspas are easy to remove and return to us for pump seal kit replacement. Please, save yourself the frustration and expense of unnecessary damage to your liner, pump motor and/or controls with proper water treatment and timely pump seal kit replacement. Call us with ANY questions.

## Savings For You

We have noticed an increase in customer awareness resulting in the repair – rather than replacement – of more Softspas. However, we still take in some Softspa trade-ins and recondition them resulting in further options for lower cost Softspa ownership.

***We are, again, discounting the prices on our (2007) Essentials price list by 15% OFF with FREE shipping on orders over \$100. until January 1, 2010.
